Data Fabric Release Note

– v. 1.7 –

What's new?

Jobs

- Docker jobs - expose an internal URL for Docker jobs

Docker jobs

Feature	Description	Context	Benefits	Live
Expose an internal URL for Docker jobs	A unique and fixed URL can be configured for each Docker job in Data Fabric	<ul style="list-style-type: none"> - Feature used by platform users to make components interact inside the platform through a fixed URL attributed to each Docker job. - Users don't have to manually reconfigure their IP and ports in case of a new delivery or crash. - This feature is paving the way to the implementation of a microservice architecture by customers, allowing the continuous delivery of individual microservices, each having a distinct development life cycle. 	<ul style="list-style-type: none"> - Improved service continuity in the interactions between platform components - Increased efficiency - Increased agility and flexibility in development - Improved user experience 	December 2017
